**Crawlers**

A crawler connects to a data store, progresses through a prioritized list of classifiers to determine the schema for your data, and then creates metadata tables in your data catalog.

Crawler "RedshiftCrawler" completed and made the following changes: 0 tables created, 0 tables updated. See the tables created in database [redshifttableschemata](#).

Crawler "CrawlerRedshift" completed and made the following changes: 1 tables created, 0 tables updated. See the tables created in database [redshifttableschemata](#).
