

Data Types - Commonly used

Print to PDF ►

Python has several data types which are commonly used. There are advanced data types such as Data Frames as part of modules such as pandas.

- Numeric - `int`, `float`, complex
- Alpha Numeric - `str`
- Collections
 - `list`
 - `set`
 - `dict`
- `tuple`
- `type(VARIABLE_NAME)` returns the data type of the variable.
- All the data types are nothing but classes.
- We can type cast data types by invoking constructor.
